No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc., (Operations Staff, P.O. Box 765, Schenectady, New York 12301), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1978 articles are the same as those shown for current articles.

# Contents of Volume 68

## Number 1, January 1979

*Full Papers*

Roger H. Sawyer. Avian Scale Development: Effect of the Scaleless Gene on Morphogenesis and Histogenesis ... 1

Alberto Ferrus. Cell Functions in Morphogenesis. Clonal Analysis of New Morphogenetic Mutations in *Drosophila melanogaster* ... 16

Eric Wieschaus and Janos Szabad. The Development and Function of the Female Germ Line in *Drosophila melanogaster*. A Cell Lineage Study ... 29

Allan J. Tobin. Evaluating the Contribution of Posttranscriptional Processing to Differential Gene Expression ... 47

Gene L. Trupin. The Identification of Myogenic Cells in Regenerating Skeletal Muscle. I. Early Anuran Regenerates ... 59

Gene L. Trupin and Linda Hsu. The Identification of Myogenic Cells in Regenerating Skeletal Muscle. II. Early Mammalian Regenerates ... 72

Toby C. Rodman and Alinda H. Barth. Chromosomes of Mouse Oocytes in Maturation: Differential Trypsin Sensitivity and Amino Acid Incorporation ... 82

F. Rudolf Turner and A. P. Mahowald. Scanning Electron Microscopy of *Drosophila melanogaster* Embryogenesis. III. Formation of the Head and Caudal Segments ... 96

Rosemary D. Ginzberg and Norton B. Gilula. Modulation of Cell Junctions during Differentiation of the Chicken Otocyst Sensory Epithelium ... 110

Thomas G. Warren and Anthony P. Mahowald. Isolation and Partial Chemical Characterization of the Three Major Yolk Polypeptides from *Drosophila melanogaster* ... 130

Norio Nakatsuji. Effects of Injected Inhibitors of Microfilament and Microtubule Function on the Gastrulation Movement in *Xenopus laevis* ... 140

John Haynie and Gerold Schubiger. Absence of Distal to Proximal Intercalary Regeneration in Imaginal Wing Discs of *Drosophila melanogaster* ... 151

M. Yamamoto, I. Iuchi, and K. Yamagami. Ultrastructural Changes of the Teleostean Hatching Gland Cell during Natural and Electrically Induced Precocious Secretion ... 162

Jerry Silver and Richard M. Robb. Studies on the Development of the Eye Cup and Optic Nerve in Normal Mice and in Mutants with Congenital Optic Nerve Aplasia ... 175

M. Thoman and J. C. Gerhart. Absence of Dorsal–Ventral Differences in Energy Metabolism in Early Embryos of *Xenopus laevis* ... 191

Sumie Tachi and C. Tachi. Ultrastructural Studies on Maternal–Embryonic Cell Interaction during Experimentally Induced Implantation of Rat Blastocysts to the Endometrium of the Mouse ... 203

Kenneth S. K. Tung, Liang-Po Bebe Han, and Andrew P. Evan. Differentiation Autoantigen of Testicular Cells and Spermatozoa in the Guinea Pig ... 224

T. R. Podleski, S. Nichols, P. Ravdin, and M. M. Salpeter. Cloned Myogenic Cells during Differentiation. Membrane Biochemistry and Fine Structural Observations ... 239

P. A. Nagainis and A. H. Warner. Evidence for the Presence of an Acid Protease and Protease Inhibitors in Dormant Embryos of *Artemia salina* ... 259

Nigel Holder and Patrick W. Tank. Morphogenetic Interactions Occurring between Blastemas and Stumps after Exchanging Blastemas between Normal and Double-Half Forelimbs in the Axolotl, *Ambystoma mexicanum* ... 271

*Brief Notes*

D. R. van der Westhuyzen. DNA-Dependent RNA Polymerases in Skeletal Muscle Cells Differentiating *in Vitro* ... 280

J. Vaněček and H. Illnerová. The Regulation of Pineal Serotonin *N*-Acetyltransferase Activity in Newborn Rats ... 287

Barbara A. Ramey and Wesley J. Birge. Development of Cerebrospinal Fluid and the Blood–Cerebrospinal Fluid Barrier in Rabbits ... 292

Michael S. Risley, John Gambino, and Ronald A. Eckhardt. Purification of *Xenopus laevis* Embryo and Liver Nuclei Using Metrizamide ... 299

Marieta B. Heaton, Sally A. Moody, and Peter L. Coultas. Oculomotor Neuroblast Migration in the Chick Embryo in the Absence of Tecto-Tegmental Fibers ... 304

Takami Oka and John W. Perry. Glucocorticoid Stimulation of Choline Kinase Activity during the Development of Mouse Mammary Gland ... 311

Leslie Leverone, Thomas Suhar, Ronald D. Brown, and R. W. Armentrout. Characteristics of Immunoglobulin Synthesized Early in the Development of *Xenopus laevis* ... 319

Janet M. Cardenas, Everett Bandman, Charles Walker, and Richard C. Strohman. Pyruvate Kinase Isozymic Shifts of Differentiating Chick Myogenic Cells *in Vivo* and in Culture ... 326

Eddy M. De Robertis and Phillippa Black. Hybrids of *Xenopus laevis* and *Xenopus borealis* Express Proteins from Both Parents ... 334

*Features* ... f-1

*Author Index for Volume 68* ... 648

*Features* ... f-1

The Subject Index for Volume 68 will appear in the December 1979 issue as part of a cumulative index for the year 1979.

## Information for Authors

*Developmental Biology* will publish papers on problems of development in the broadest sense. Embryonic and postembryonic development, growth, regeneration and tissue repair in plants and animals, and the analysis of these phenomena at the molecular and cellular levels are topics suitable for the journal. Papers on reproductive biology, aging, and teratology will be published only when they bear on developmental mechanisms of general interest. Papers are sought that employ the techniques and concepts of many disciplines including those of biochemistry, biophysics, cytology, experimental morphogenesis, genetics including cell genetics, immunology, neurobiology, physiology, and microbiology. In all areas, analytical rather than descriptive studies will be favored.

*Original papers* only will be considered. Submission of a manuscript implies the authors' assurance that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Explicit proof of these implied assurances may be required at the Editor's discretion. Articles and any other material published in *Developmental Biology* represent the opinions of the author(s), and should not be construed to reflect the opinions of the editor(s), the publisher, or the Society of Developmental Biology.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

*Articles* usually do not exceed 15,000 words and must be preceded by an abstract of about 200 words that should be fully intelligible by itself. Brief notes are 2500 words or less, including the bibliography, and should have an abstract of less than 100 words. All papers will be published in English.

*Manuscripts* should be concise. Full documentation of results in support of conclusions should be combined with maximum brevity compatible with clarity. The discussion section should relate the present work to previous knowledge but should not be expanded into a review of the field. The standard order of sections is: abstract, introduction, materials and methods, results and discussion. Combined results and discussion may be used. In the manuscript acknowledgment, references, footnotes, tables, and figure legends should follow the discussion in that order. All pages of the manuscript should be numbered consecutively and typed double-spaced throughout. Authors should provide a running title of 35 letters and spaces or less. Use footnotes sparingly. Cite them with superscript numbers and type them on a separate sheet. With rare exceptions do not italicize for emphasis.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

*Abbreviations and units* should be used consistently. Consult the lists published in the *Proceedings of the National Academy of Sciences (U.S.A.)* the *Journal of Biological Chemistry,* and *Biochemistry* for standard abbreviations which need not be defined. Collect all abbreviations into a footnote and refer to it at the first use of an abbreviation.

The use of units should follow the Système International. Use prefixes, e.g., $\mu$M, not $10^{-6}$ M. Note that *M* stands for molar, not mole. Use hr, min, sec, rpm, and cpm without definition, without a period, and without an "s" in the plural (i.e., 20 min).

*Figures* should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the author's name.

*Line drawings* should be made with India ink on smooth white paper or professional-quality drafting paper. Do not submit original line drawings larger in size than 13 x 10 in.; instead enclose smaller prints. Good quality prints are acceptable in any case. Drawings will be reduced as much as is compatible with the complexity of the figure, usually to column or page width. The lettering should be large enough to be at least 1.5 mm high after reduction.

*Photographs* should be the actual size for reproduction and labeled with letters 2 to 4 mm high. Figures should fit column or page width and should be at most 8 in. long. If the author decides to bleed the page (no margins), labels and figure numbers should be no closer than 3/4 in. to the margin. Figures to be bled must be 7 × 10 1/4 in. (17.8 × 26 cm) to allow trimming. When several figures appear together as one plate, mount them on cardboard or paper as close together as possible. The engraver will tool thin white lines between figures. Give magnifications in the legends or indicate them with a scale marker on the photograph. The second copy of each manuscript must include good-quality glossy prints of all photographs. Two reviewers' copies should be submitted when originals are oversized or mounted on heavy cardboard. The author will defray the expense of color plates.

*Tables* should be typed on separate pages and numbered consecutively with Arabic numerals, and each should have a concise heading.

*References* to the literature should be cited as: Doe (1965) has observed that . . . ; (Doe, 1955); Doe *et al.* (1960) should be used in the case of articles with more than two authors. Use suffices a, b, etc. following the date to distinguish two or more works by the same author(s) in the same year (Doe, 1960a, b). Numbered references will no longer be accepted. Arrange literature citations in the bibliography alphabetically according to the surname of the author, using the following order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Abbreviate titles of journals according to *Chemical Abstracts' Service Source Index*.

*Page proofs* rather than galleys will be sent. This speeds production. Detailed instructions will be sent with proofs. A quick response and minimal changes on proof are imperative to maintain schedules.

*Features* will include announcements of meetings and courses in the field of developmental biology, and some meeting reports. Persons interested in preparing meeting reports are encouraged to contact the Editor.

*To submit* a manuscript, send two copies to Igor B. Dawid, Department of Embryology, Carnegie Institution of Washington, 115 West University Parkway, Baltimore, Maryland 21210, Tel. (301) 235-0460. Indicate the name, address, and telephone number of the author who should be contacted in editorial matters.
